specifications

Cut your emissions by up to 90%
using premium quality HVO

**Woodlands
Power**

How can you enhance your reputation for sustainability while using a stable fuel solution? Choose **hydrotreated vegetable oil (HVO)**.

HVO is a second-generation biofuel made from 100% renewable raw materials, such as vegetable oils and green waste. It is compatible for use in all modern diesel engines and off-road machinery.

HVO addresses the performance and operational issues of mineral diesel and first-generation biofuels while retaining and even enhancing their green credentials. When compared with fossil fuel, HVO offers better stability. With a higher cetane number, HVO delivers faster ignition and improved engine performance.

If you want to cut your greenhouse gas emissions by up to 90%, choose HVO.

100%
renewable

Storage life of up
to 10 years

Free from FAME,
sulphur and fossils

Reduce your
emissions by 90%

Direct replacement
for diesel

Reduced need for
regular testing

**Thinking of switching to cleaner fuel? Talk to one of our
team about the benefits of HVO. Tel: 0845 600 3335.**
