Stage V generators – the fuel-efficient, low emission option

Offering high performance and ultra low emissions, Stage V generators can offer great savings for customers.

Stage V (or Stage 5) is being implemented as an anti-polluting measure to improve air quality under NRMM (Non-Road Mobile Machinery) regulations.

In order to comply with the regulations, new engines from manufacturers must now meet Stage V requirements for mobile machinery, i.e. temporary or mobile generators.

CHOOSING A FUEL-EFFICIENT STAGE V GENERATOR CAN SIGNIFICANTLY REDUCE YOUR RUNNING COSTS

 Meets NRMM regulations	 Minimised emissions + high performance	 Ideal for events and construction	 More sustainable power generation
